

Dave Hudson

Contract frontend and product engineer

React · TypeScript · Next.js · AI integrations

<https://dave.applification.net>

LinkedIn: [hudsond](#)

Open to upcoming contracts. Remote UK; North East hybrid considered. Contracts through Applification Ltd.

I build web applications, modernise frontends and take products to release. More than twenty years of hands-on engineering across startups, health technology and public services, with full-stack depth and production AI experience.

Engineering and delivery

Frontend: React, TypeScript, Next.js, Tailwind, component architecture, design systems and API integration.

Delivery: Storybook, automated testing, Cypress, GitHub Actions, Vercel previews, product scoping and technical leadership.

Full-stack and AI: Node.js, Convex, typed APIs, Vercel AI SDK, MCP integrations, LLM product interfaces and agent workflows.

Selected experience

2026–present

Applification Ltd · Founder and product engineer

Contract engineering and specialist MCP integration delivery. Contexture and Voiced are released open-source products. Loami and astack are in development; StoryLoops is an archived experiment.

October 2024–May 2026

Logically · Principal Frontend Engineer, then Principal AI Product Engineer

Full-time employment. Architected and built most of Intelligence v2 with one other engineer, leading five frontend engineers and coordinating with backend engineers and data scientists. Rebuilt the unsupported frontend in Next.js and moved reporting behind typed APIs. Co-built production Agentic Chat, connecting threat analysts to Databricks capabilities through MCP tools and the application API. Routine UI changes fell from days to minutes; the team released several times a day.

March–August 2024

Eruptiv / Client Server · Sole frontend engineer

Designed and built the complete Next.js and TypeScript recruitment frontend against an existing API in three months. Took it to production after four months, working with an API engineer and designer. Storybook made component states available for design review and handover.

March 2022–October 2023

Peppy Health · Senior frontend engineer, leading a two-person team

Rebuilt the clinician-facing Peppy Admin application. Catalogued hundreds of components in Storybook, replaced tightly coupled screens with reusable components and added a complete Cypress end-to-end suite running in GitHub Actions. The work supported more frequent releases and fewer bugs while the business scaled to £12m ARR.

2021–2023

Pando · Health technology product engineering

Built the Pando Access prototype in four weeks, then architected its Next.js application. Reworked clinician-facing React interfaces and developed a white-label React Native proof of concept.

2018–2019

Surevine · Senior Engineer, Scrum Master and Tech Lead

Security-cleared frontend delivery for Cabinet Office, MoD and other government agencies. Sole frontend ownership in small teams, using story maps to turn policy requirements into agreed scope. Previously held clearance; no current clearance is claimed.

2016–2017

HMRC · Scrum Master

Supported a co-located team of 17 delivering tax repayments, company car, medical benefits and tax estimation services. Introduced mob programming, story mapping, ATDD/BDD and example mapping.

From 2013

Mobile engineering and delivery leadership

Product delivery for TUI, Le Boat, Chubb Travel and the British Army, using Appcelerator Titanium and Node.js APIs, with React Native later.

2003

Founded Applification Ltd

Early clients included bet365, Department of Health, Newcastle Business School, University of York, Sunderland Council and Entrepreneurs Forum. Applification remains the company through which I deliver contract work.

Credentials

Scrum Master and Product Owner certifications awarded in 2015, expired in 2019.

Public professional CV · October 2026. Current availability and full case studies are on my profile.
